

# Mona Setje-Eilers (Energy Modelling Analyst)

---

After finishing my Master's degree at the Technische Universität Berlin I joined Aurora's modelling team in Oxford. I had previously worked on energy models in an academic context and wanted to develop models for actual analysis and forecasts.

Aurora has allowed me to utilise my knowledge of energy markets and complex mathematical analysis to solve a range of dynamic and stimulating problems.

The culture at Aurora is friendly and I enjoy working with highly-motivated analysts and modellers of various backgrounds.

I am also keen to encourage other women to consider these types of roles.
