

## David Taylor (Modeller)

---

I started working at Aurora shortly after finishing my Master's degree at the University of Oxford. I wanted a job where I could apply my technical knowledge, and was interested in the energy industry. Aurora, with its academic roots seemed like a perfect fit.

Since joining I have worked on a variety of challenging and rewarding projects, modelling power markets in both the UK and Europe.

The people and culture at Aurora are friendly, and I've enjoyed working with a team of highly motivated analysts with a diverse range of academic backgrounds.
