

The Company

Aurora Energy Research is a dynamic and fast-growing energy analytics company. We provide research, consulting, and data-driven analytics on European and global energy markets that helps our clients navigate the global energy transformation.

Aurora was founded in 2013, by a group of University of Oxford academics on the premise that technological progress, and policies tackling climate change, render energy markets increasingly complex – but that this complexity yields to rigorous, sophisticated analysis and modelling.

Aurora is now a thriving, rapidly growing company of over 120 staff with offices in Oxford, Berlin and Sydney. Demand for our services – spanning subscription research and consultancy – is immense. We currently serve over 200 of Europe's most influential energy sector participants, and we expect to grow beyond 150 staff by the end of the year.

Senior Associate/Project Leader – Research & Publications, Berlin

Based in Berlin, you will join Aurora's Research & Publications team – playing a pivotal role across the firm as the lead expert on the markets covered out of the Berlin office, and developing our thought leadership, analysis and subscription product offering in this space.

Within Research & Publications Berlin, we currently offer services on the German power market, the German renewables market, the Polish power market as well as the Dutch power market. In the near future, we will expand our offering further to northern and southern Europe, as well as offering more technology-specific services. The scope of this role will be to lead two of these services at the beginning, with the option to take over more responsibilities later. This involves keeping abreast and providing insightful analysis on key developments across these markets, including consideration of how power markets will be affected by decarbonisation policies and the emergence of low carbon technologies.

You will play a leading role in all aspects of product delivery and development, as well as engagement with senior clients – directing our ongoing research, managing existing publications, conducting novel analyses, identifying client needs and new

business opportunities, and developing new services. You will develop data-driven strategic insights into the energy transition for both public and private sector clients; and manage junior colleagues in developing analysis and insights to enhance clients' decision making.

Although the role is based in our research team, the successful applicant would also play a role in supporting consulting projects undertaken in our Commissioned Projects team, Including major transactions and policy decisions in the energy sector.

The successful candidate will work in a dynamic, intellectually stimulating, and demanding yet supportive environment. They will enjoy autonomy, the opportunity to substantially influence major decisions in the energy sector, and to grow into industry leaders under the guidance of Directors with deep experience addressing major strategic issues at the world's leading advisory firms.

The position suits an experienced associate/consultant or project manager from a top-tier strategic or economic consultancy, energy company, financial services company, or knowledge-driven firm or institution. The successful candidate will combine technical strength with a strong track record of leadership and performance in team-oriented environments.

Required attributes:

- At least 3-5 years of experience at a leading consultancy, energy company, investment bank, or other knowledge-driven firm or institution (e.g. think tank, research institute)
- Very good university degree in a quantitative subject (e.g. Economics, Engineering, Finance, Mathematics, Statistics, Physics)
- Previous experience of working on energy-related projects or policy – particularly in a European power market context
- Demonstrated success in project and process management in team-oriented environments
- Ability to analyse, interpret, and derive insight from complex quantitative data and information
- Ability to communicate and collaborate with both technically and non-technically minded parties

- Self-starter, entrepreneurial mind-set, and desire to grow the business
- Excellent command of English

Desirable attributes:

- It would be highly advantageous to have existing knowledge of the German, Polish, Dutch or other European power markets
- Leadership experience demonstrated by previous roles of professional responsibility or extracurricular activities
- Demonstrated success in client-facing positions
- Other European languages (in particular German, Dutch, Polish and Italian) would be highly beneficial
- Competence in advanced data analytics (e.g. Python, R, Matlab, Advanced Excel)

The successful candidate would ideally start as soon as possible. Please submit a CV, cover letter as well as academic and work reference letters. We will review applications as they are received.
